

PP-007-Crack Healer (Dry Mix)

Crack Healer is a powder based, one of the strongest and rigid pre-mixed concrete sealer ready to use compound that can last for a very long time, cracks can occur due to a large number of events. One of the most common causes is the difference of temperatures (thermal movements), it is specially formulated with bounded Carbon-rich and non-linear molecular structure of re-dispersible powders, designed to absorb impact shocks due to torsional movement's capability of the polymer chain. It is highly flexible to be used in repairing and filling of cracks.

Application Advice:

The surface of crack must be dry (moisture free) clean and free of dust, oils, loose particles etc. All cavities and cracks must be primed with Elastomeric Coating. Depending on the weather conditions, the cracks will be partially filled with Crack Healer within 8-12 hours from priming as to attain tack free surface. In case of deep crack, each layer should be filled 1/4th of an inch at a time between drying of each layer.

Coverage: Depends on the depth, width and shape of crack.

Characteristics:

- High crack resistance
- Non-shrinkage
- Excellent bonding strength.
- Non-Toxic

Storage:

Keep in dry place without humidity conditions and direct exposure to heat or sun-light. Part used packets should be sealed tight between applications.

Packing: 1Kg /Bags

The technical information and instructions supplied in this datasheet are based on the knowledge and experience of the Research and Development Department of our company and on results from long-term applications of the product in practice. The recommendations and suggestions referring to the use of the product are provided without guarantee, since site conditions during the applications are beyond the control of our company. Therefore, the user is responsible for confirming that the chosen product is suitable for the envisaged application. The present edition of this technical datasheet automatically cancels any previous one concerning the same product
